Outlines

- *MIS's Problem*
- *Why Open Source*
- *Problems of Management*

MIS's Problem!

- 有 *Performance* 之後，要錢比較容易！
- 你可以找工讀生啊！旁邊學校學生很便宜！
- 人家買 xxxx 比你 *IT/MIS* 更重要！

• 計畫趕不上變化，變化趕不上主管的一句話！

IT 系統規畫規畫目標

- e化的目的 - 透過 IT 平台的建置，提升效率並降低成本
- 因此 e化的規畫需符合以下原則：
 - 降低 IT 常規人力需求
 - 降低 IT 年度預算需求
 - 簡化 IT 管理機制
 - 降低企業運轉成本
 - 企業文化有限度的改變

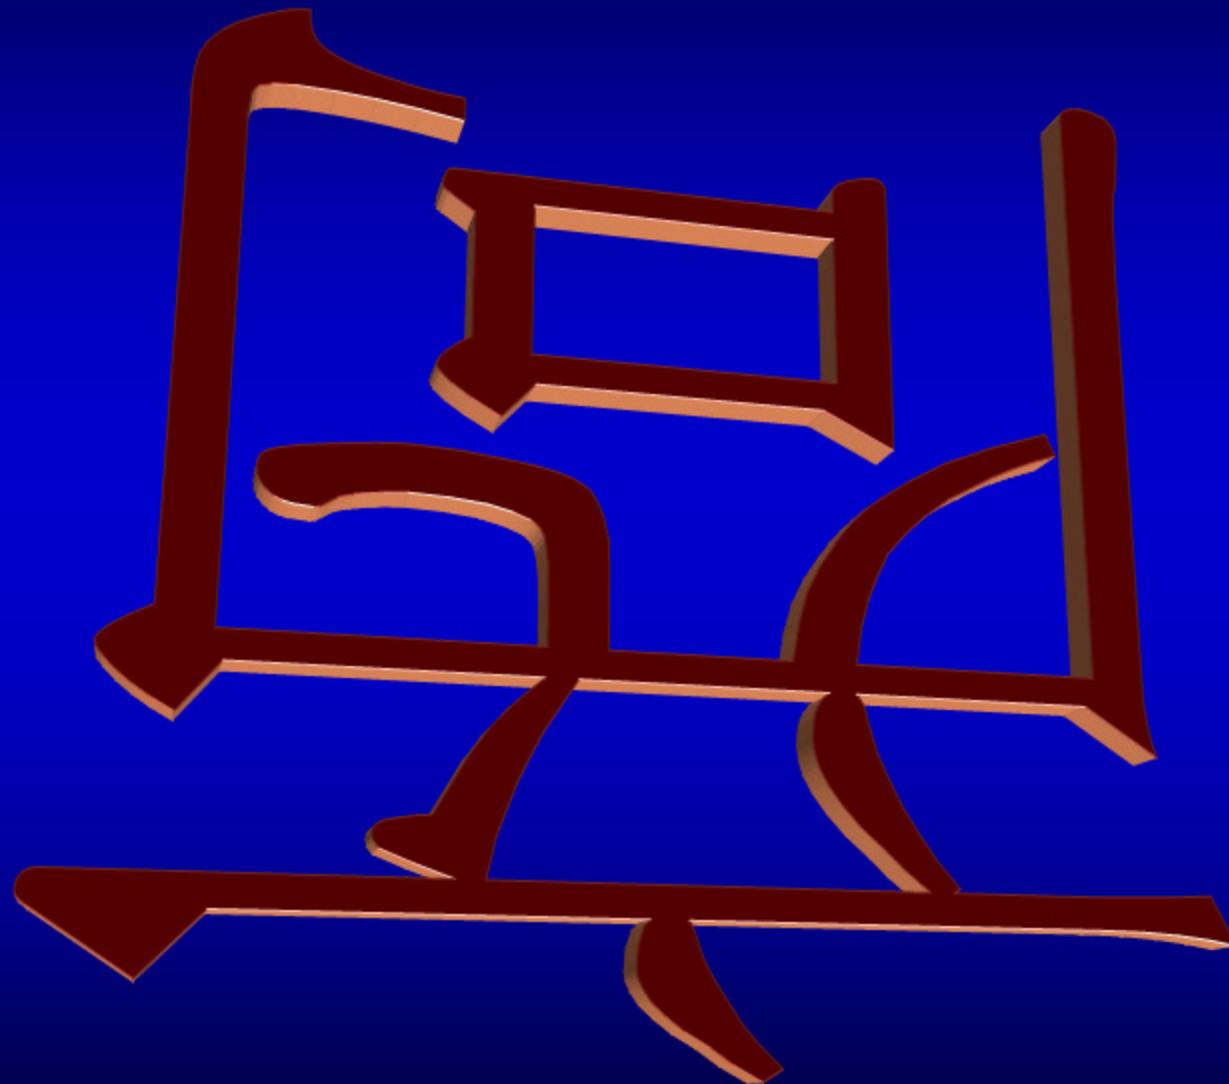

當我們面臨重大問題，如果我們沒有從引發問題的層次往上提升，從更高的層次觀察問題，這些問題將不可能被解決。

-愛因斯坦

Why Open Source?

Problems of Management

老闆永遠是對的

- 這件事能不能自動？
- 我下個小時能不能看到報表？
- 這個能不能做得跟 xxxx 的系統一樣方便？

V.S.

- 這種東西，幾千塊就買得到吧？
- 你沒事就在要錢，怎麼都沒有 *Performance*？
- 你沒事就躲在機房裡幹嘛？我要怎麼找你開會？

隔靴搔癢

商業策略受制於 *IT* 技術的不足？

What is SOA

- *an IT strategy (Concept) that*
 - *organizes the discrete functions (in enterprise applications) into services*
 - *Interoperable*
 - *Standards-based*
 - *can be combined and reused quickly to most business needs*

from: "Domain Model For SOA"

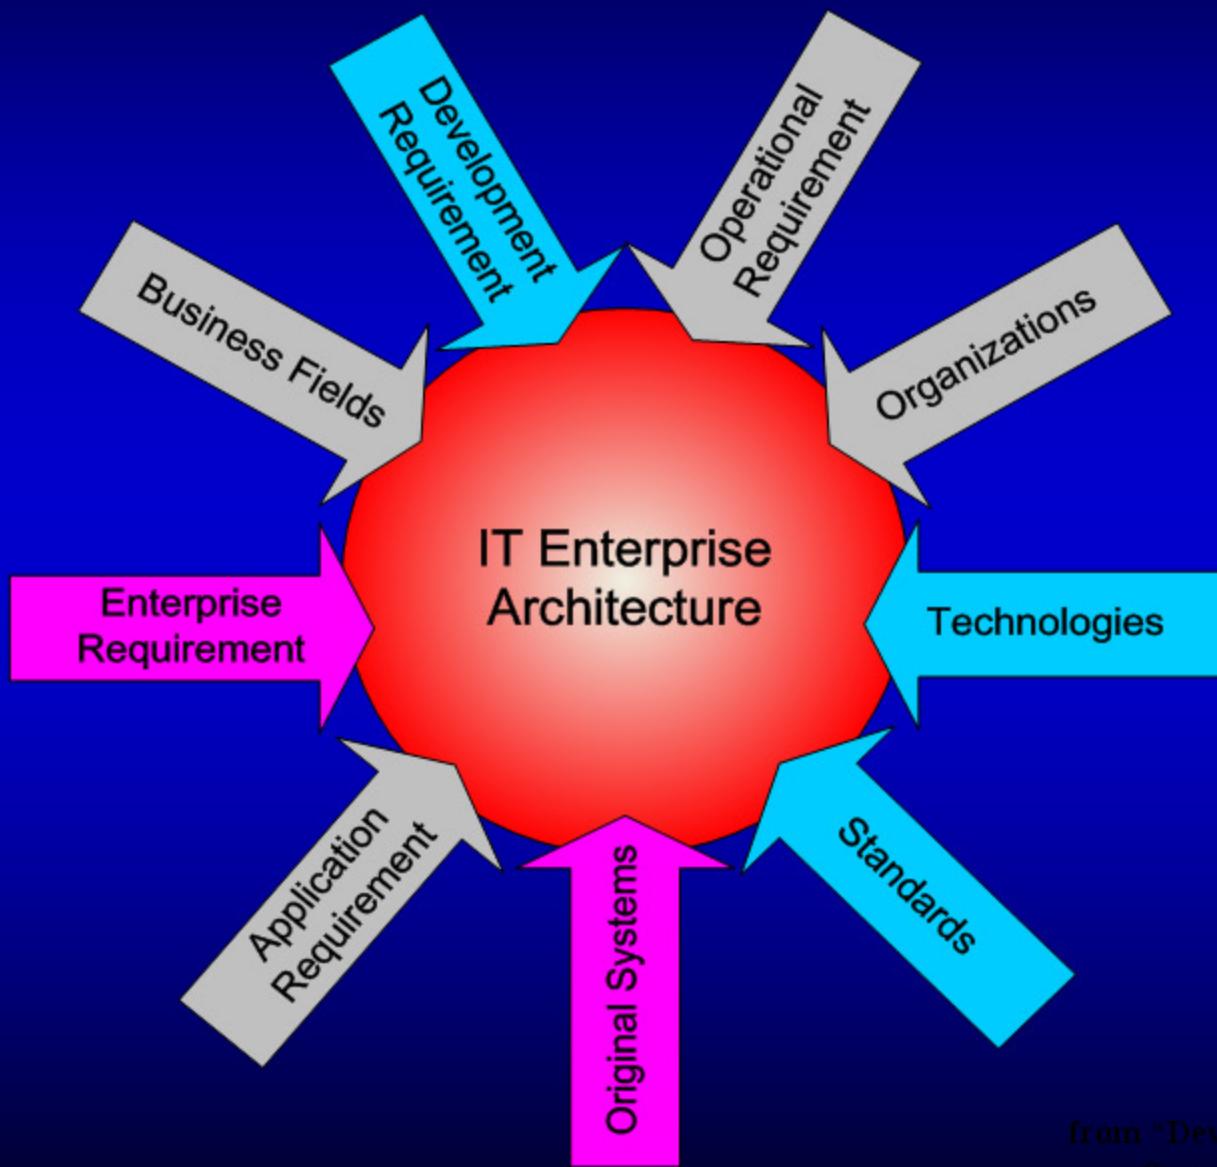

BEA_SOA Domains_WP.pdf

2006 COSCUP

Benefits of SOA

- *Improve productivity, agility and speed for **BOTH Business and IT***
- *Allows IT to deliver services faster and align closer with business*
- *Allows the business to respond quicker and deliver optimal user experience*

Enterprise Architecture

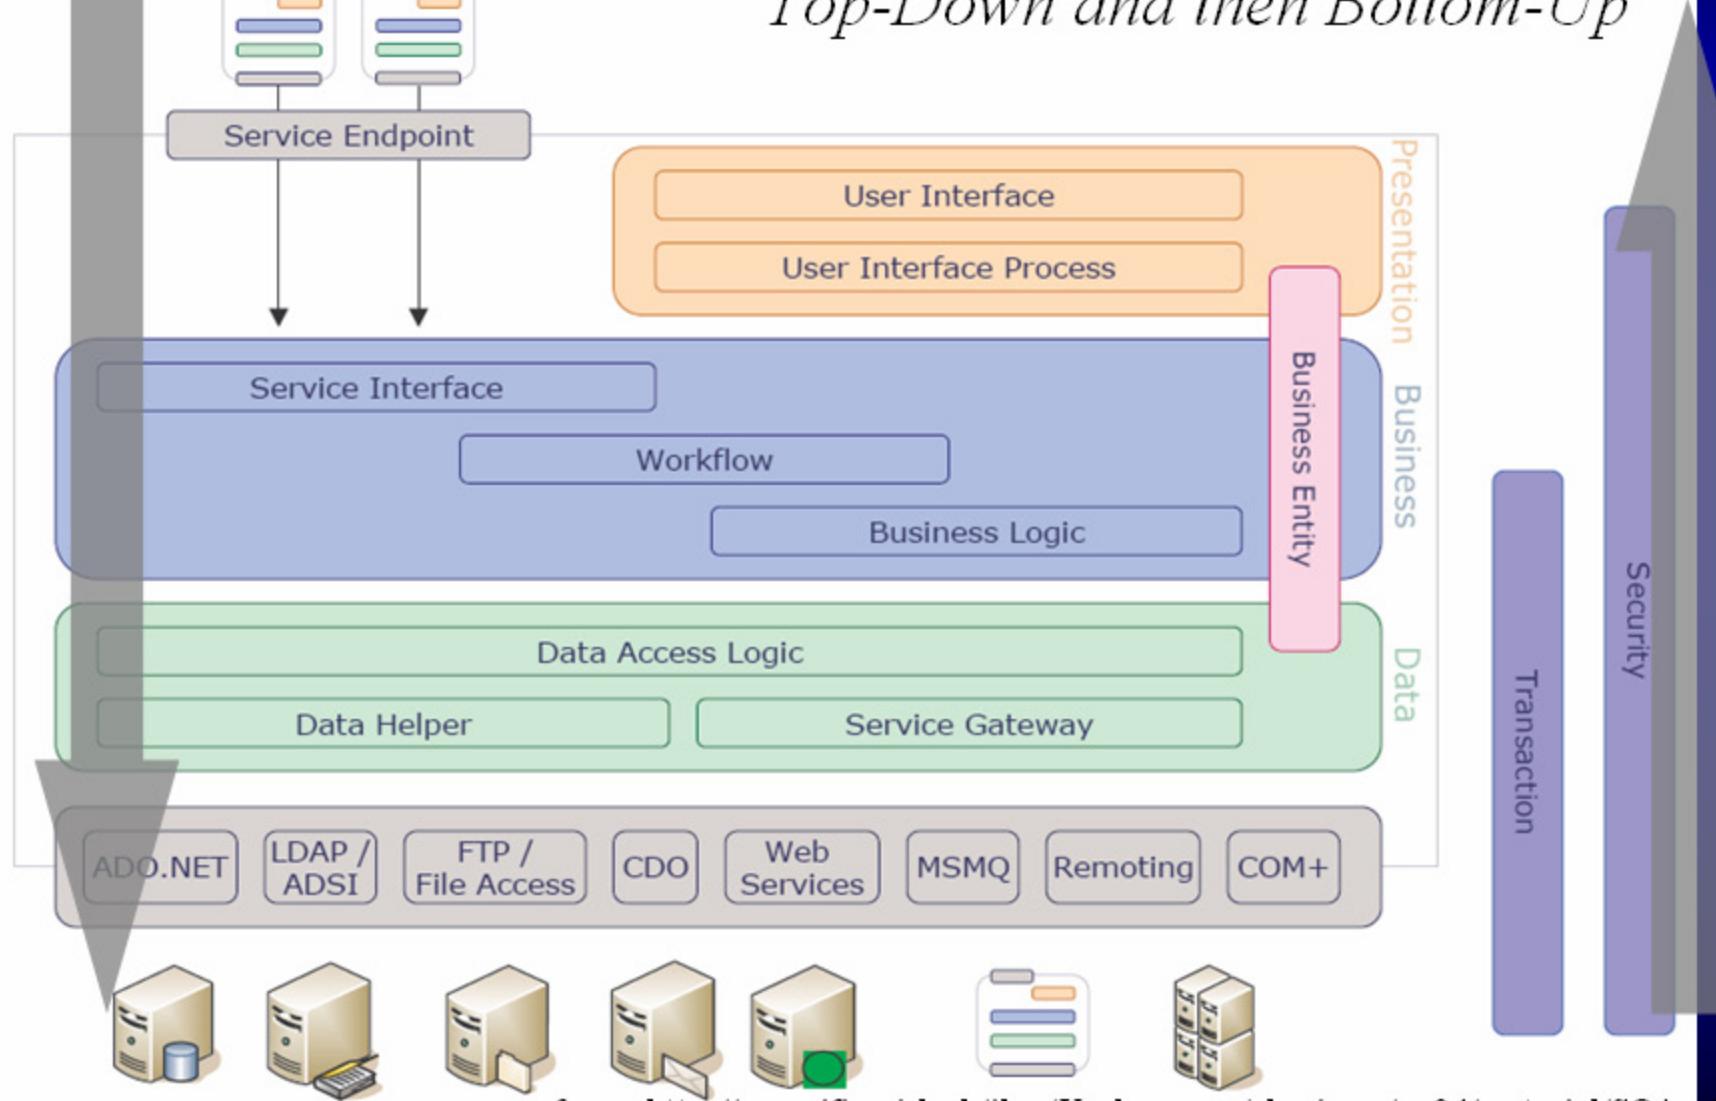

from "Developing E-Business
System & Architecture"

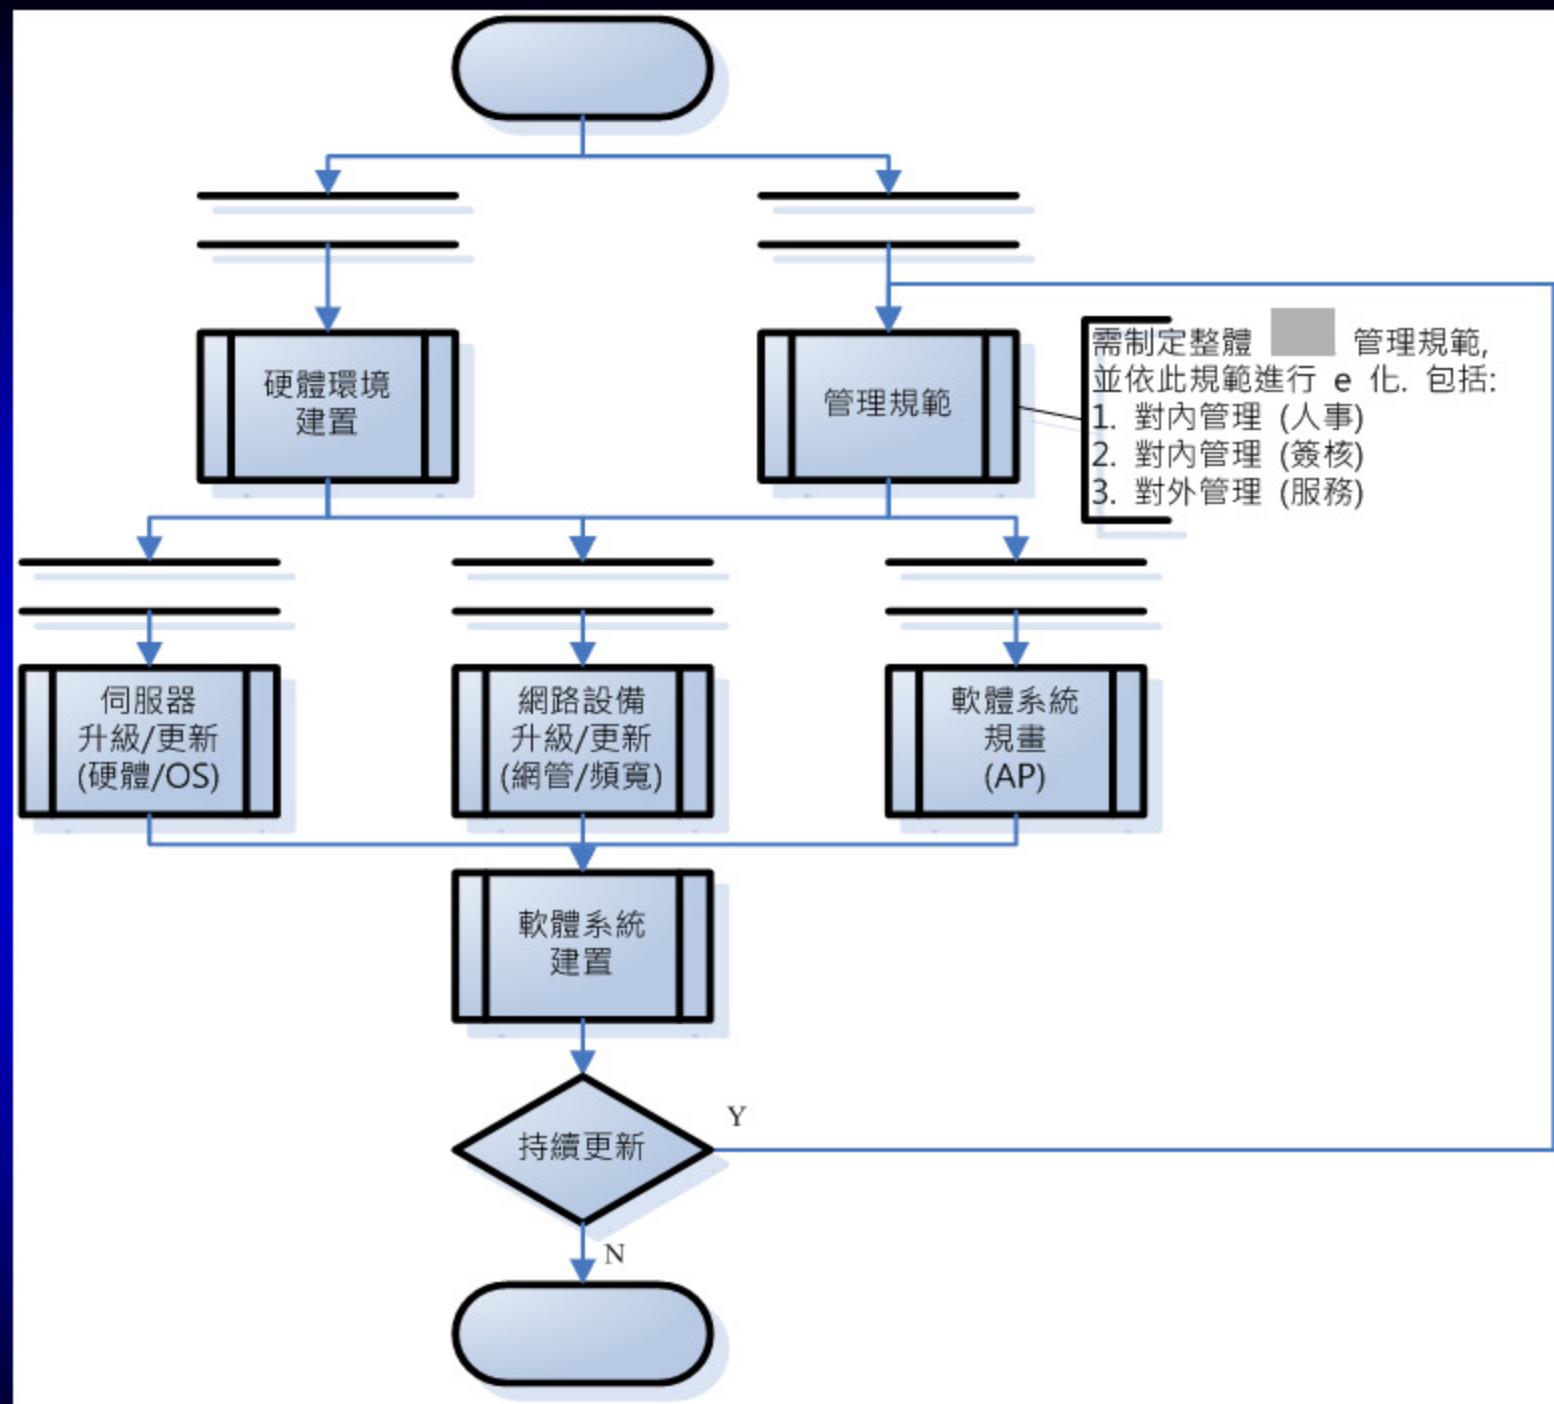

2006 COSCUP

How to achieve?

Top-Down and then Bottom-Up

from: http://www_ifi.unizh.ch/ilm/Vorlesungen/obusiness/ws04/material/SOA.pdf

Open Standards

SOA and Web Service Standards

Semantic Standards

Business Services: Service Offerings and Components
e.g. Book_Flight, Low_Fare_Search, Update_PNR_Data

Infrastructure Standards

Evolving Industry Semantics
(ACORD, FIXML, OTA/XML, UCCNet, ebXML)

Service Orchestration (WS-BPEL)

Service Discovery (WSIL, UDDI, RAS)

Service Invocation & Messaging (WS-I, SOAP)

Service Description (WSDL, RAS)

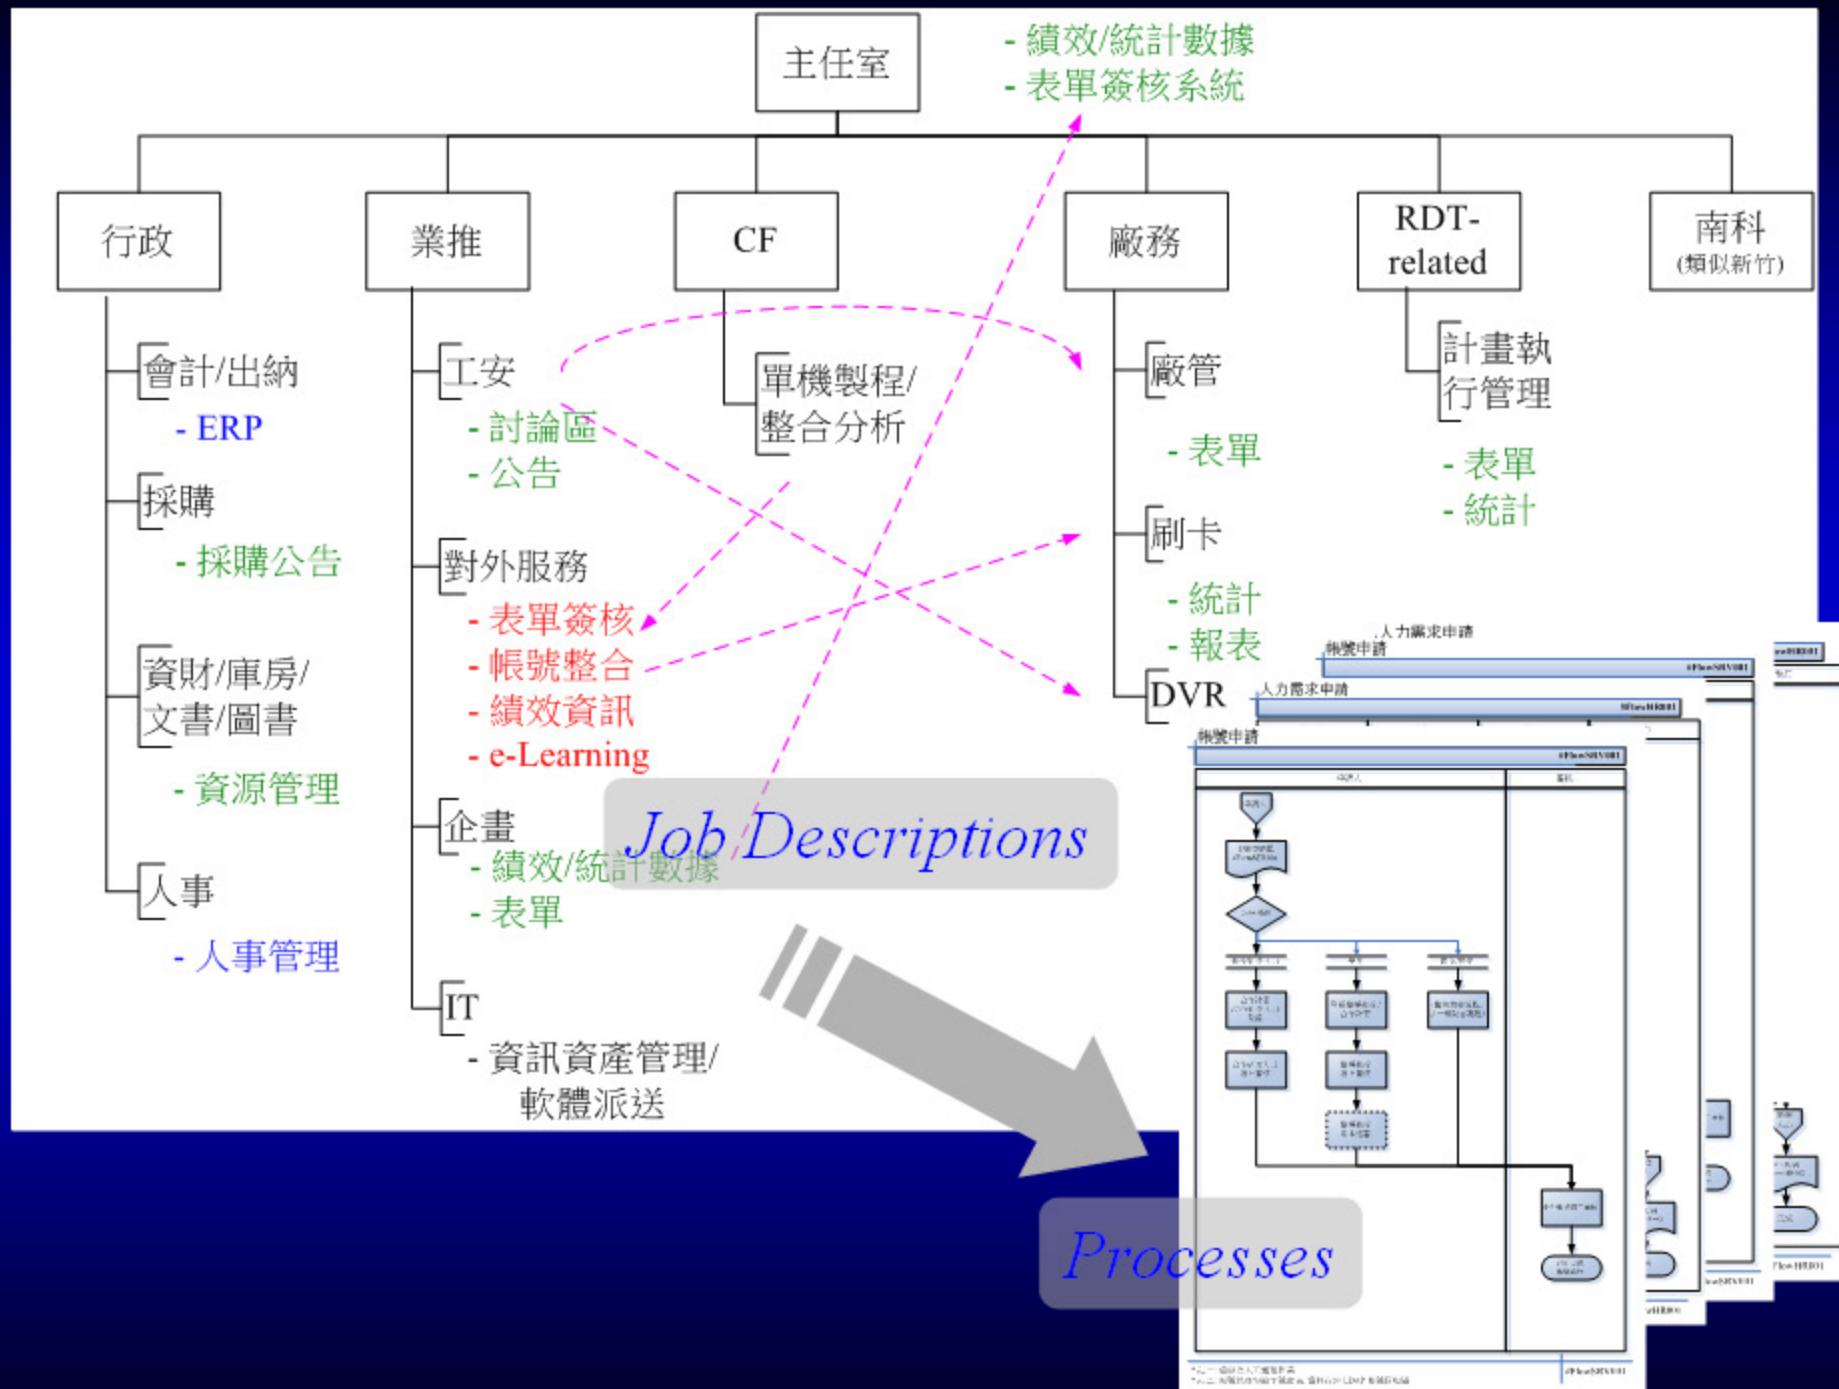

XML (InfoSet, Namespace, Schema)

Network Protocol (HTTP, SMTP, Other)

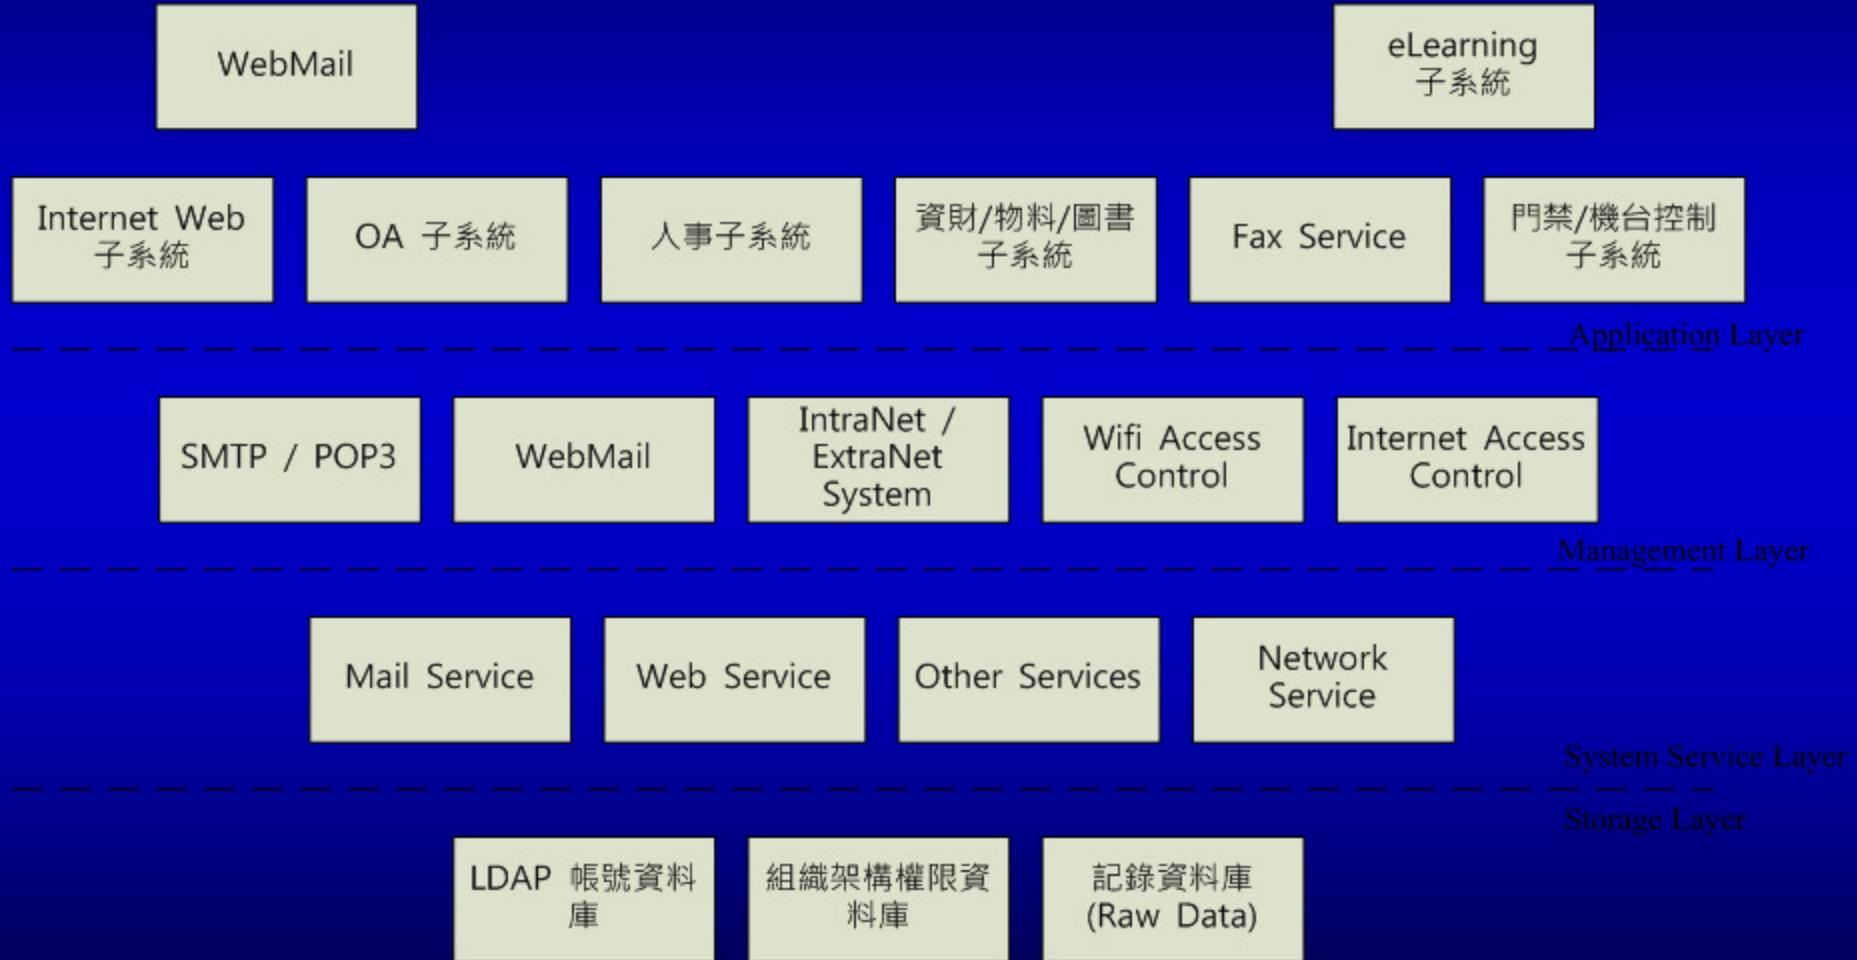

Security (WS-SEC)

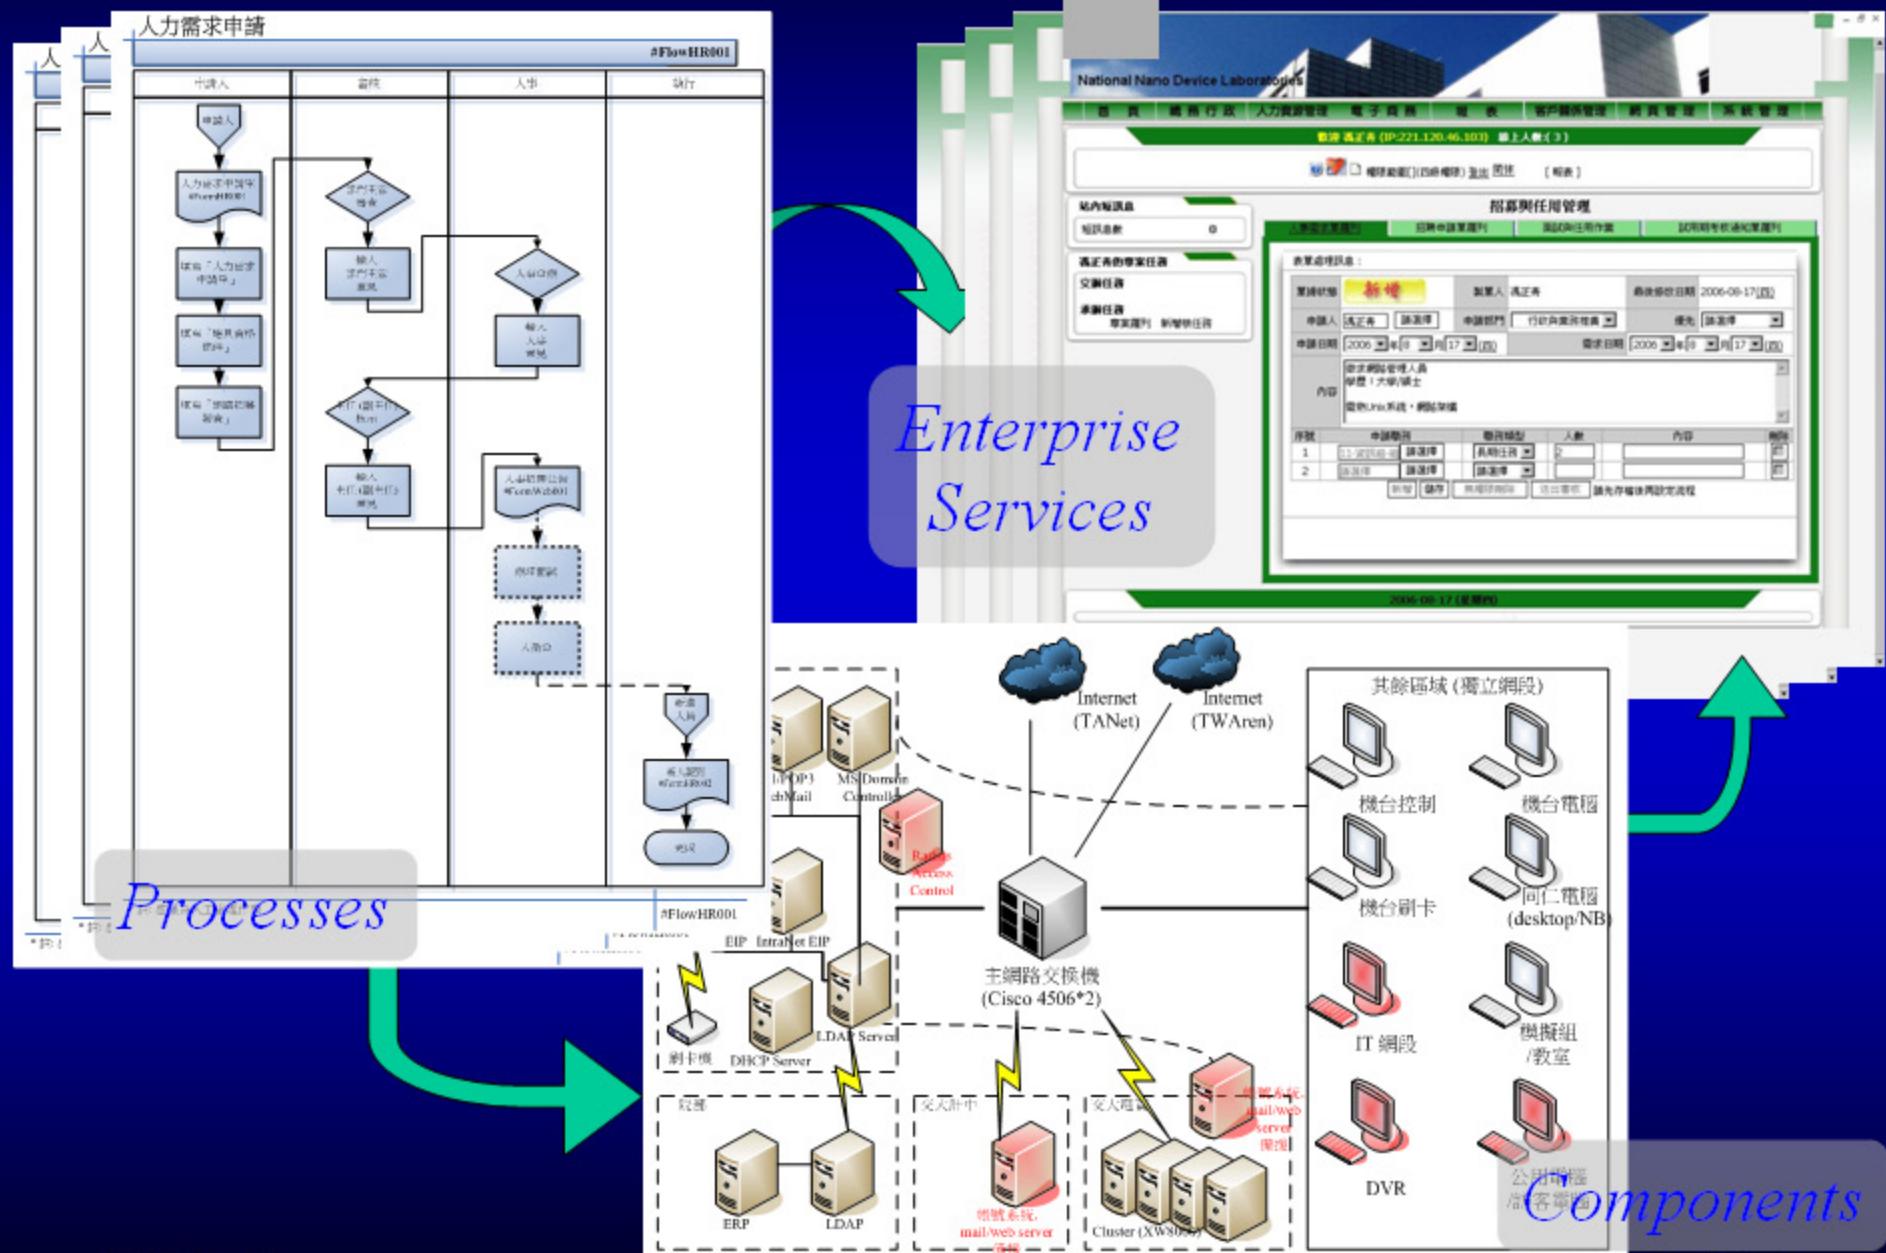

Transactions (WS-TX)

Management

資訊系統架構

System Architecture

AP Systems

NW Monitor -
snmp / log report

Security - Snort
/ iptable / ipchain

Directory Service
- OpenLDAP

RDBMS -
PostgreSQL

Web Server
- Apache

Language -
PHP

System Management

Operating System - FreeBSD

Hardware

HA / Load Balancing / Clustering [Hardware of Management Tool]

Firewall/…

Voice / Data

LAN / WAN

Servers

DRP / Backup

Storage

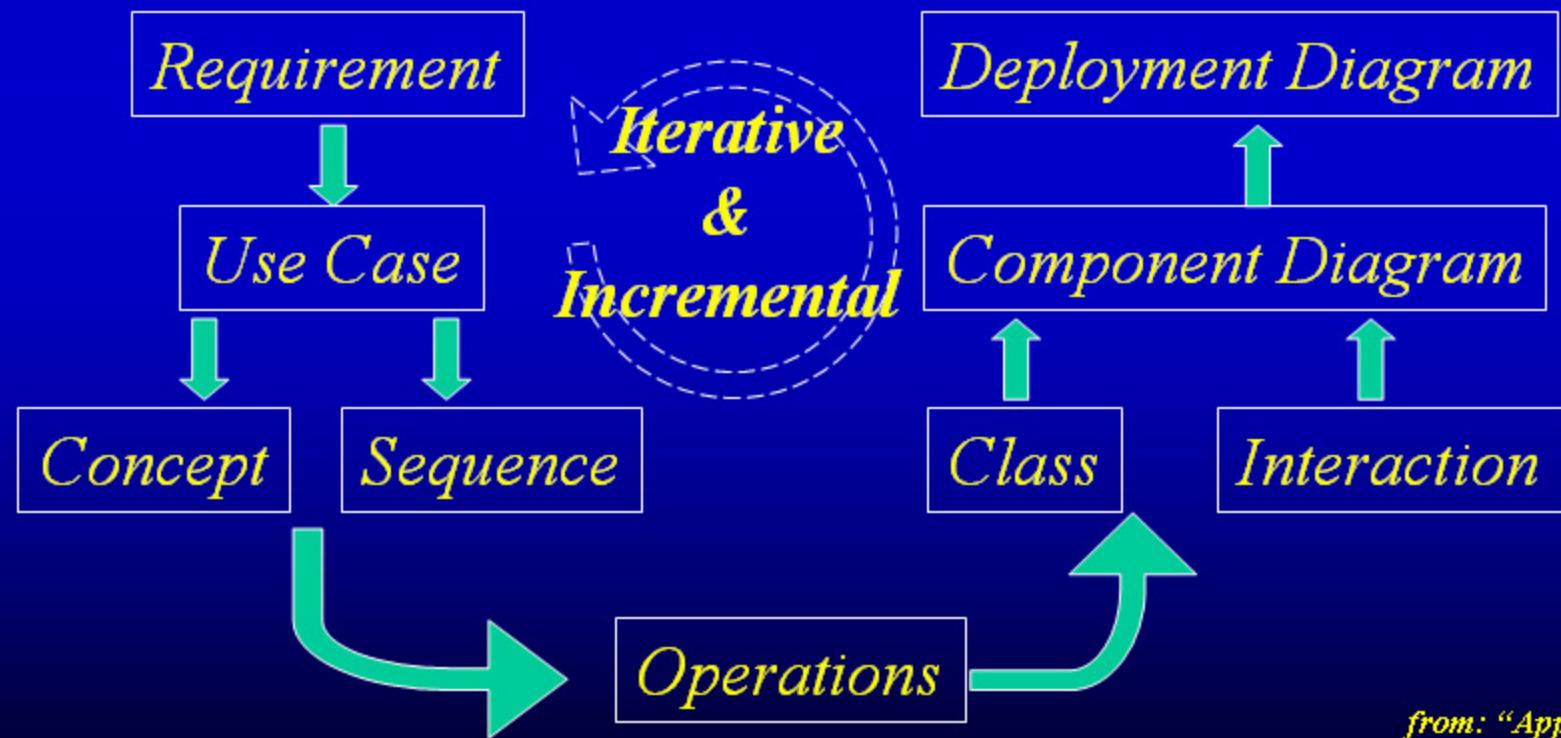

Clients

SOA v.s. BPR

- *BPR – Business Process Reengineering*
 - *Distributed Processing*
 - *Job Coordination and Application Integration*
 - *Dynamic System*
 - *Multiple / Complicated Components*
 - *Growing Incrementally*
- *Fully Suitable for SOA*

SOA v.s. RPM

- *RPM - A Recommended Processes and Models*
 - An Object-Oriented Software Engineering Method
 - An UML-based SA/SD Method

from: "Applying
UML and Patterns"
2006 COSCUP

By the way.....

- *Why SOA? (Conspiracy Point of View!!!)*
 - *Because IBM / BEA / Oracle wants to sell their middleware / ESB (Enterprise Service Bus)*
 - *Because they wants to sell their EIA and Portal solution (to fight with BroadVision / Tibco / Netgrity / ...)*
 - *To make Web-Service more popular than .Net / Java by promoting Standards like SOAP / XML / ...*
- *Concept Only!*
 - *Make middleware / ESB virtualized*
 - *single platform / language*
 - *Less Open Standards*
 - *Easier for small systems*

我該選哪些 *Open Source Software*?

- 很多人用的
- 有大廠支援的
- 找得到人問的
- 你熟的平台
- 跟你現在已用的 OSS 容易整合的
 - 使用相同語言
 - 標準資料交換介面
- 該用 *linux* 當 *desktop* 嗎?
- *And?*
